DGPP Timeline, Full Event Log

Year	Quarter	Month	Day	Event	Figure Cited	Source
2025	Qtr 1	March	1	GoldBod Act 1140 passed by Parliament, signed by President Mahama	-	Wikipedia / Parliament
2025	Qtr 2	April	1	GoldBod formally established, absorbing PMMC's functions	-	goldbod.gov.gh
2025	Qtr 4	November	1	GoldBod rejects Asaase News report alleging GH¢3bn in first-year losses	GH¢3bn claim (disputed)	goldbod.gov.gh
2025	Qtr 4	December	1	GoldBod publicly rejects the IMF figure as a Bank of Ghana matter, not its own	-	GhanaWeb
2025	Qtr 4	December	1	IMF Fifth Review (ECF programme) reports G4R programme losses	\$214m (through Q3 2025)	IMF / MyJoyOnline
2026	Qtr 1	January	1	GoldBod CEO states GoldBod itself has recorded no losses; cites unaudited surplus estimate	GH¢700-800m surplus est.	goldbod.gov.gh
2026	Qtr 1	January	1	IMF Communications Director Julie Kozack reaffirms the \$214m quasi-fiscal loss figure	\$214m (unchanged)	Citinewsroom / GBC
2026	Qtr 2	April	1	GoldBod publishes FY2025 audited financial statements	GH¢5.44bn overall surplus	goldbod.gov.gh / Ghanaian Times
2026	Qtr 3	July	1	GoldBod dismisses Minority Caucus claims of losses amid gold price decline	23%+ gold price slump cited	Graphic Online
2026	Qtr 3	July	1	Government, Bank of Ghana and GoldBod sign agreement transferring DGPP fully to GoldBod	-	Modern Ghana / Ghanaweb
2026	Qtr 3	August	1	IMF 2026 Article IV Consultation & Sixth Review published; DGPP losses re-quantified	GH¢22bn (2025) / 1.5% of GDP	Modern Ghana / Ghanaweb
2026	Qtr 3	August	1	Minority Leader Afenyo-Markin cites IMF Country Report No. 26/213 losses	\$1.7bn+ / GH¢1.7bn+ cited	Adomonline

KEY POINT

GoldBod's audited surplus and the IMF's cited DGPP losses are not the same claim.

GoldBod's figure covers its own fee income.

The IMF's figure covers Bank of Ghana's losses on gold trading. Both can be accurate at once, since they measure different parts of the gold program

Key Points, FY2025 Performance Summary

GoldBod's FY2025 overall surplus of GH¢5.46 billion is real, but 81.88% of it is government seed capital, not earned income. Strip that out and the number that matters is GH¢909.7 million, GoldBod's core operating surplus from its actual fee business. That is still a strong first-year result.

Cost discipline was the standout signal. Total expenditure fell 15.5% while headcount grew 294.7%, cutting cost per employee 78.6%, from GH¢1.14 million to GH¢243,530. Few first-year state institutions scale operations and cut costs at the same time.

The balance sheet strengthened across every metric. Cash grew 1,088% to GH¢8.77 billion. Total assets grew 476.4% to GH¢9.47 billion. Despite liabilities also growing 160%, the liabilities-to-assets ratio actually improved, from 92.4% to 41.70%, because assets grew faster.

Revenue is concentrated but mechanically simple. Two fee lines, ASM gold aggregation charges and assay services, make up 92.4% of core revenue. Both scale with gold volume and value moving through GoldBod's own system, not with market trading positions.

None of this reflects the July 2026 transfer of the Domestic Gold Purchase Programme from the Bank of Ghana to GoldBod. Once GoldBod owns that programme directly, IMF-cited losses ranging from GH¢3.9 billion to GH¢22 billion could sit on its own balance sheet. That single event is the most important variable in GoldBod's outlook, and the strong FY2025 results say nothing about how the institution performs once it carries that exposure.

Investor Key Points

GoldBod is not a gold-mining or gold-trading investment. It is a fee-collecting aggregator sitting on top of Ghana's ASM gold flow, and that distinction should anchor how an investor reads every number in this report.

The earnings quality is real but narrow. GH¢909.7 million in core surplus came from a 0.25% assay fee and a 0.5% service charge applied to gold volumes, a durable, low-risk income stream as long as ASM formalization continues, but one with a hard ceiling unless fee rates or purchase volumes change.

The government subvention is not free money sitting idle. It funds the working capital GoldBod needs to actually buy gold before reselling or exporting it, so a large subvention balance is a sign of trading activity, not inefficiency, though it does mean GoldBod's reported revenue overstates its earned income for anyone modeling recurring cash flow.

The DGPP transfer is the single largest pending risk to underwrite. An investor should not extrapolate FY2025's balance sheet strength into FY2026 without first pricing in some version of the scenario range modeled on this page. The gap between the Base Case and Worst Case cash projections, roughly GH¢6 billion versus a GH¢12 billion shortfall, is wide enough that it should shape position sizing, not just risk disclosure language.

GoldBod currently carries no meaningful long-term debt and zero finance costs, a rare and valuable starting position for an institution about to absorb a large new risk category. That balance sheet cushion is the asset an investor is actually buying exposure to going into FY2026.

Forecast Methodology and Assumptions

These are illustrative scenarios, not company guidance or GoldBod-published projections. Revenue growth assumptions are built from GoldBod's own stated FY2026 planning inputs, an average gold price near \$5,000 per ounce and continued ASM purchase momentum matching its reported H1 2026 pace. Cost assumptions extend the FY2025 efficiency trend at a more conservative rate, since further headcount growth is likely as the DGPP integrates. Loss scenarios use IMF-cited figures for the Domestic Gold Purchase Programme, not GoldBod's own forecasts, since GoldBod has not published a transfer-cost estimate. Treat the Worst Case scenario as the outer bound of publicly cited figures, not a central expectation, and the Base Case as the more decision-relevant planning reference. All projections should be revisited once GoldBod publishes FY2026 interim results or any transfer-related guidance.

Key Investment Areas Within GoldBod's Core Mandate

Any capital or partnership interest in GoldBod should stay inside its actual mandate, aggregation, assaying, and formalized ASM export, rather than diversification into gold mining or trading positions the institution was not built to run.

Assay and testing infrastructure. GoldBod's second-largest revenue line is assay services. Expanding certified lab capacity in additional mining regions increases both fee volume and the accuracy that underpins the traceability claims justifying the entire formalization programme.

Regional aggregation centers. GoldBod's core fee, the aggregation service charge, is its single largest revenue line. More physical collection points closer to ASM sites reduce smuggling incentives and capture volume that still leaks to informal buyers, directly growing the largest number on the income statement.

Digital traceability systems. The credibility of GoldBod's entire model rests on demonstrating gold moved from a licensed mine to a legal export, the basis for its foreign exchange retention claims. Investment in tracking infrastructure protects that credibility and supports the case for expanding fee rates over time.

Taskforce and enforcement capacity. GoldBod's FY2025 expenditure included GH¢14.3 million for taskforce deployment. Strengthening this function protects volume, since every tonne that moves through informal channels instead is fee revenue GoldBod never collects.

Risk management and treasury function. This is the most urgent gap. GoldBod has operated as a fee collector with essentially no trading risk exposure. Building a proper risk management, hedging, and treasury function before the July 2026 DGPP absorption is complete is the highest-priority use of capital on this list, directly addressing the scenario range modeled on this page.

ASM miner support and financing. Miners selling through GoldBod's formal channel do so partly because it is now the only legal option, but retention and continued formalization improve if GoldBod extends financing, equipment support, or better terms to licensed miners, an investment in the volume base its entire fee structure depends on.
